**Definitions**

**% = W (wt%) = Percent (mass of sample / weight of product). ND = Not Detected (refers to dynamic range of the method)**  
**Percentage of Delta 9-THC on a dry weight basis = The percentage of Delta 9-THC by weight in cannabis item after excluding all moisture from the item. Total Potential Delta 9-THC or CBD is calculated to take into account the loss of a carbonyl group during decarboxylation using the following formula: Total Potential Delta 9-THC = Delta 9-THC + (Delta 9-THCA \* 0.877) and Total CBD = CBD + (CBDA \* 0.877). Not equal to a concentration level of Delta 9-THC, on a dry weight basis, higher than 0.3 percent + or - the measurement uncertainty.**
